Meknes - Morocco

Summary

Software engineering student at 1337 (UM6P) with a diploma in Artificial Intelligence from ESTM. Comfortable across the stack, from low-level C/C++ systems programming to full stack web development, backend APIs, and AI powered solutions with React, TypeScript, Python, Django, FastAPI, Docker, and LLM based systems. Focused on writing clean, scalable code and shipping projects that work end to end, from system internals to production deployment.

Education

1337 Coding School (UM6P), Khouribga 2023 – Present
Software Engineering (Project-based curriculum)
– system programming (C/C++), algorithms, networking, backend development

Higher School of Technology (EST), Meknes 2021 – 2023
Diploma in Artificial Intelligence
– Machine Learning, Deep Learning, Computer Vision

Technical Skills

Languages: Python, JavaScript, TypeScript, C/C++
Backend: Node.js, Django, FastAPI, Express, REST APIs, OAuth & Authentication
Frontend: HTML, CSS, React, Vite, TailwindCSS
Databases: PostgreSQL, Redis, Supabase, Pinecone (Vector DB)
AI/ML: TensorFlow, PyTorch, scikit-learn, Pandas, NumPy, Groq, OpenAI, Gemini, RAG Pipelines
Systems & DevOps: Linux, Git, Docker, Docker Compose, Networking, Nginx

Projects

MeetLeet — RAG Chatbot 2026 – Present • [Website](#)
– Built a RAG pipeline (React/TypeScript, Express) with Pinecone vector search, Gemini embeddings, and Groq inference.
– Implemented semantic caching (Supabase pgvector) over a QA base built from the project handbook and website, enriched via an admin panel.
– Implemented multi-provider auth (Google, GitHub, 42 Intra OAuth) with MFA and row-level security.

VibeTune — AI Music Platform 2025–2026 • [Code](#)
– LLM-based mood analysis via Groq API to generate playlists from text and image inputs.
– Hybrid recommendation engine combining collaborative and content-based filtering.
– Developed within a 5-person team; developed the Django backend, managed AI integration, and built search features with filtering and pagination.

Customer Churn Prediction Platform 2026 • [Code](#)
– SVM, KNN, and Random Forest trained on 7k+ IBM Telco records with GridSearchCV (5-fold CV).
– FastAPI inference backend with joblib model serving and React dashboard for churn visualization.
– Deployed with Docker Compose and Nginx reverse proxy.

Transformer Sentiment Classifier 2025 • [Code](#)
– Transformer encoder built from scratch, attention mechanisms, positional encoding, full training pipeline, 84.9% classification accuracy on the IMDb sentiment dataset.
– Exposed via FastAPI and containerized with Docker.

Languages

Arabic (Native) • **English** (Professional – Fluent) • **French** (Reading – Intermediate, Speaking – Basic)
